

Better Sounding Music in Zoom meetings

Music will sound better in zoom if you adjust the microphone settings on your zoom account page. To begin, log into your account and click on settings. Scroll down until you see the setting “Allow users to select original sound in their client settings.” Click button to enable it.

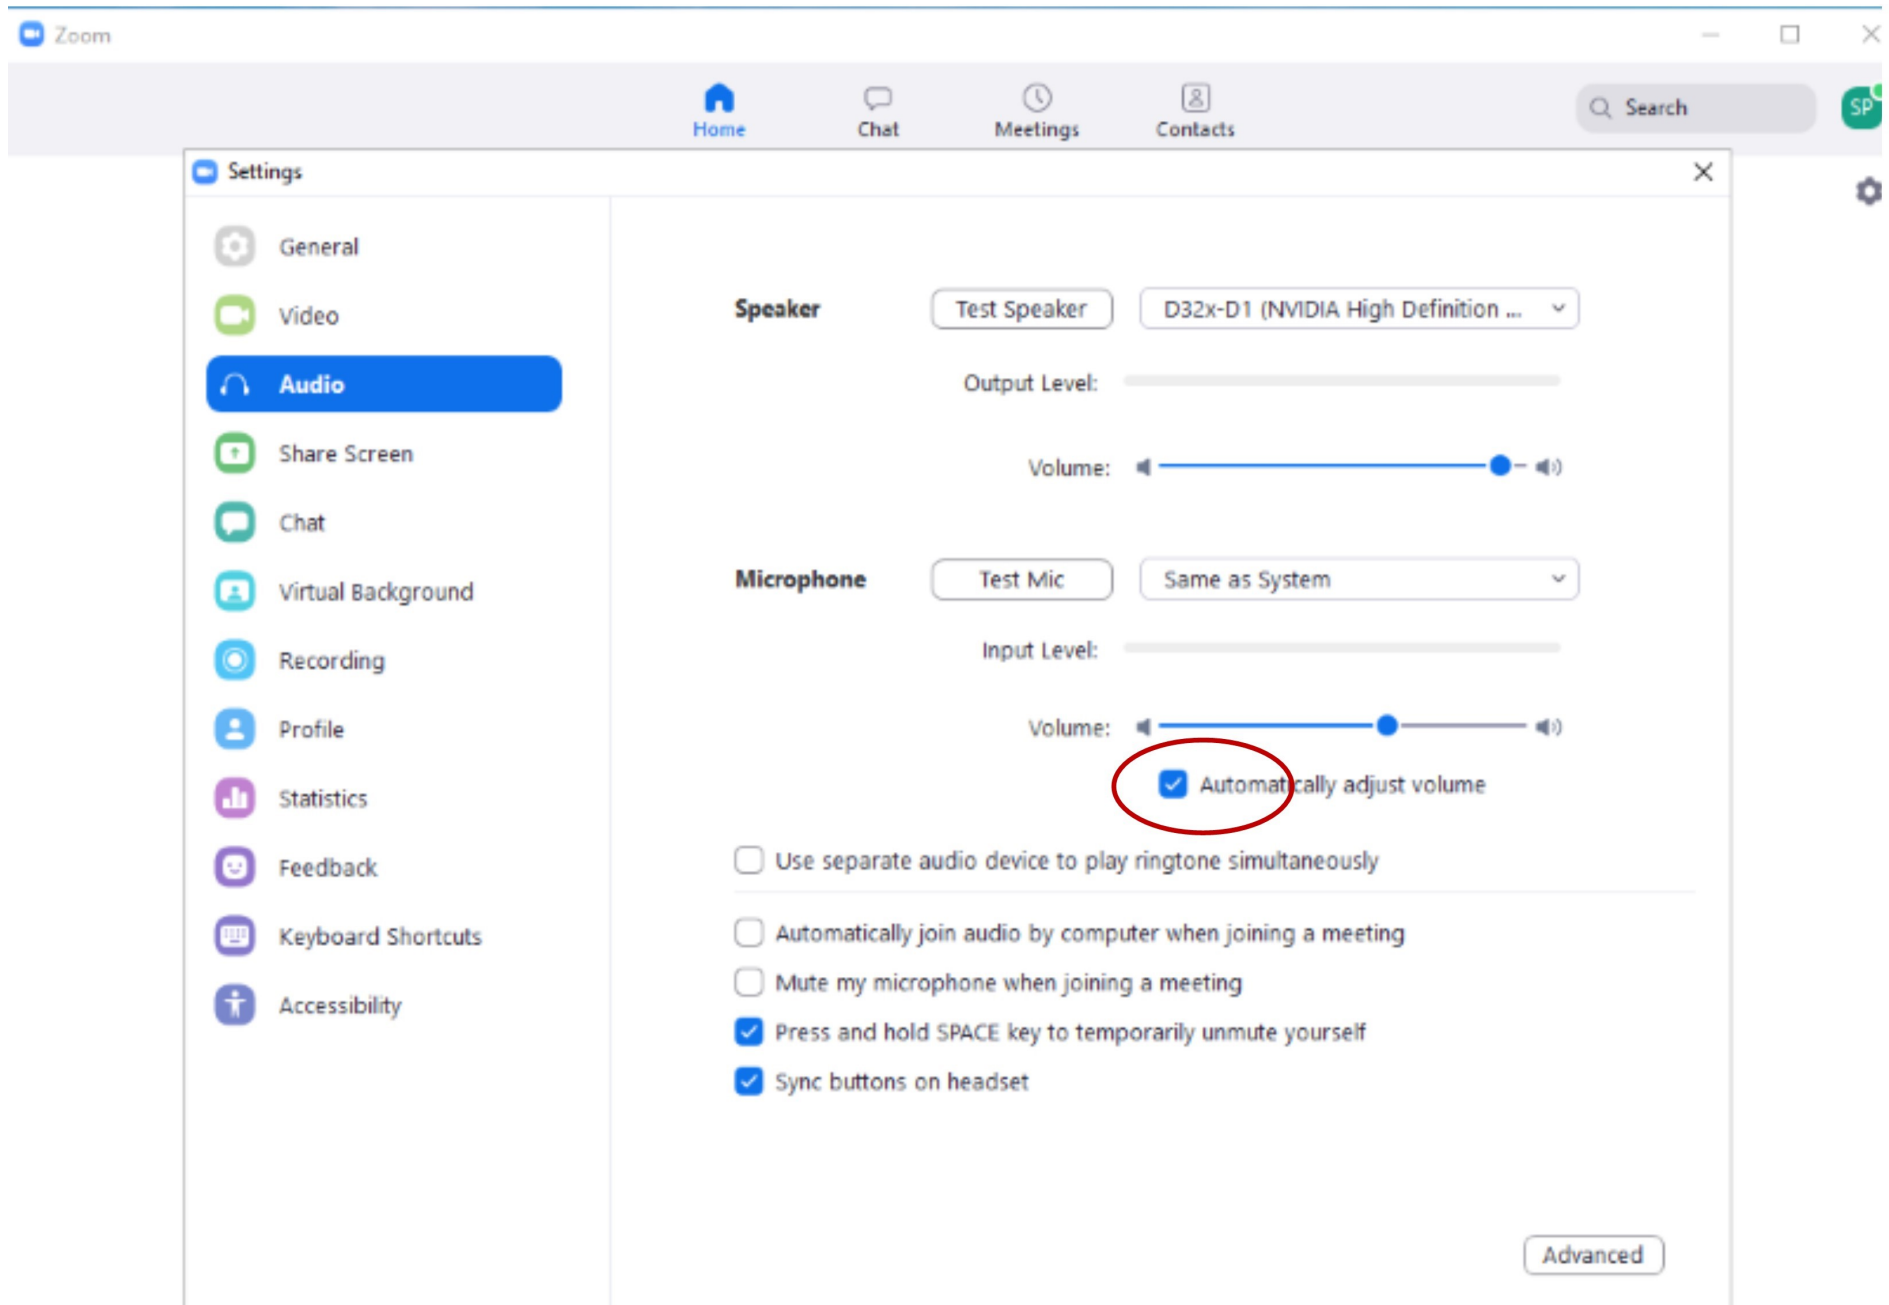

The screenshot shows the Zoom account settings page. The navigation bar at the top includes the Zoom logo, SOLUTIONS, PLANS & PRICING, CONTACT SALES, and utility links like REQUEST A DEMO, 1.888.799.5926, RESOURCES, and SUPPORT. The main content area is divided into a left sidebar with categories: Schedule Meeting, In Meeting (Basic), In Meeting (Advanced), Email Notification, and Other. The 'In Meeting (Advanced)' section is active, displaying several settings with toggle switches. The setting 'Allow users to select original sound in their client settings' is highlighted with a red circle and has its toggle switch turned on (blue). Other settings include 'Only show default email when sending email invites', 'Use HTML format email for Outlook plugin', 'Allow users to select stereo audio in their client settings', 'Waiting room', 'Show a "Join from your browser" link', and 'Allow live streaming meetings'. The 'Allow live streaming meetings' section includes checkboxes for Facebook, Workplace by Facebook, YouTube, and Custom Live Streaming Service.

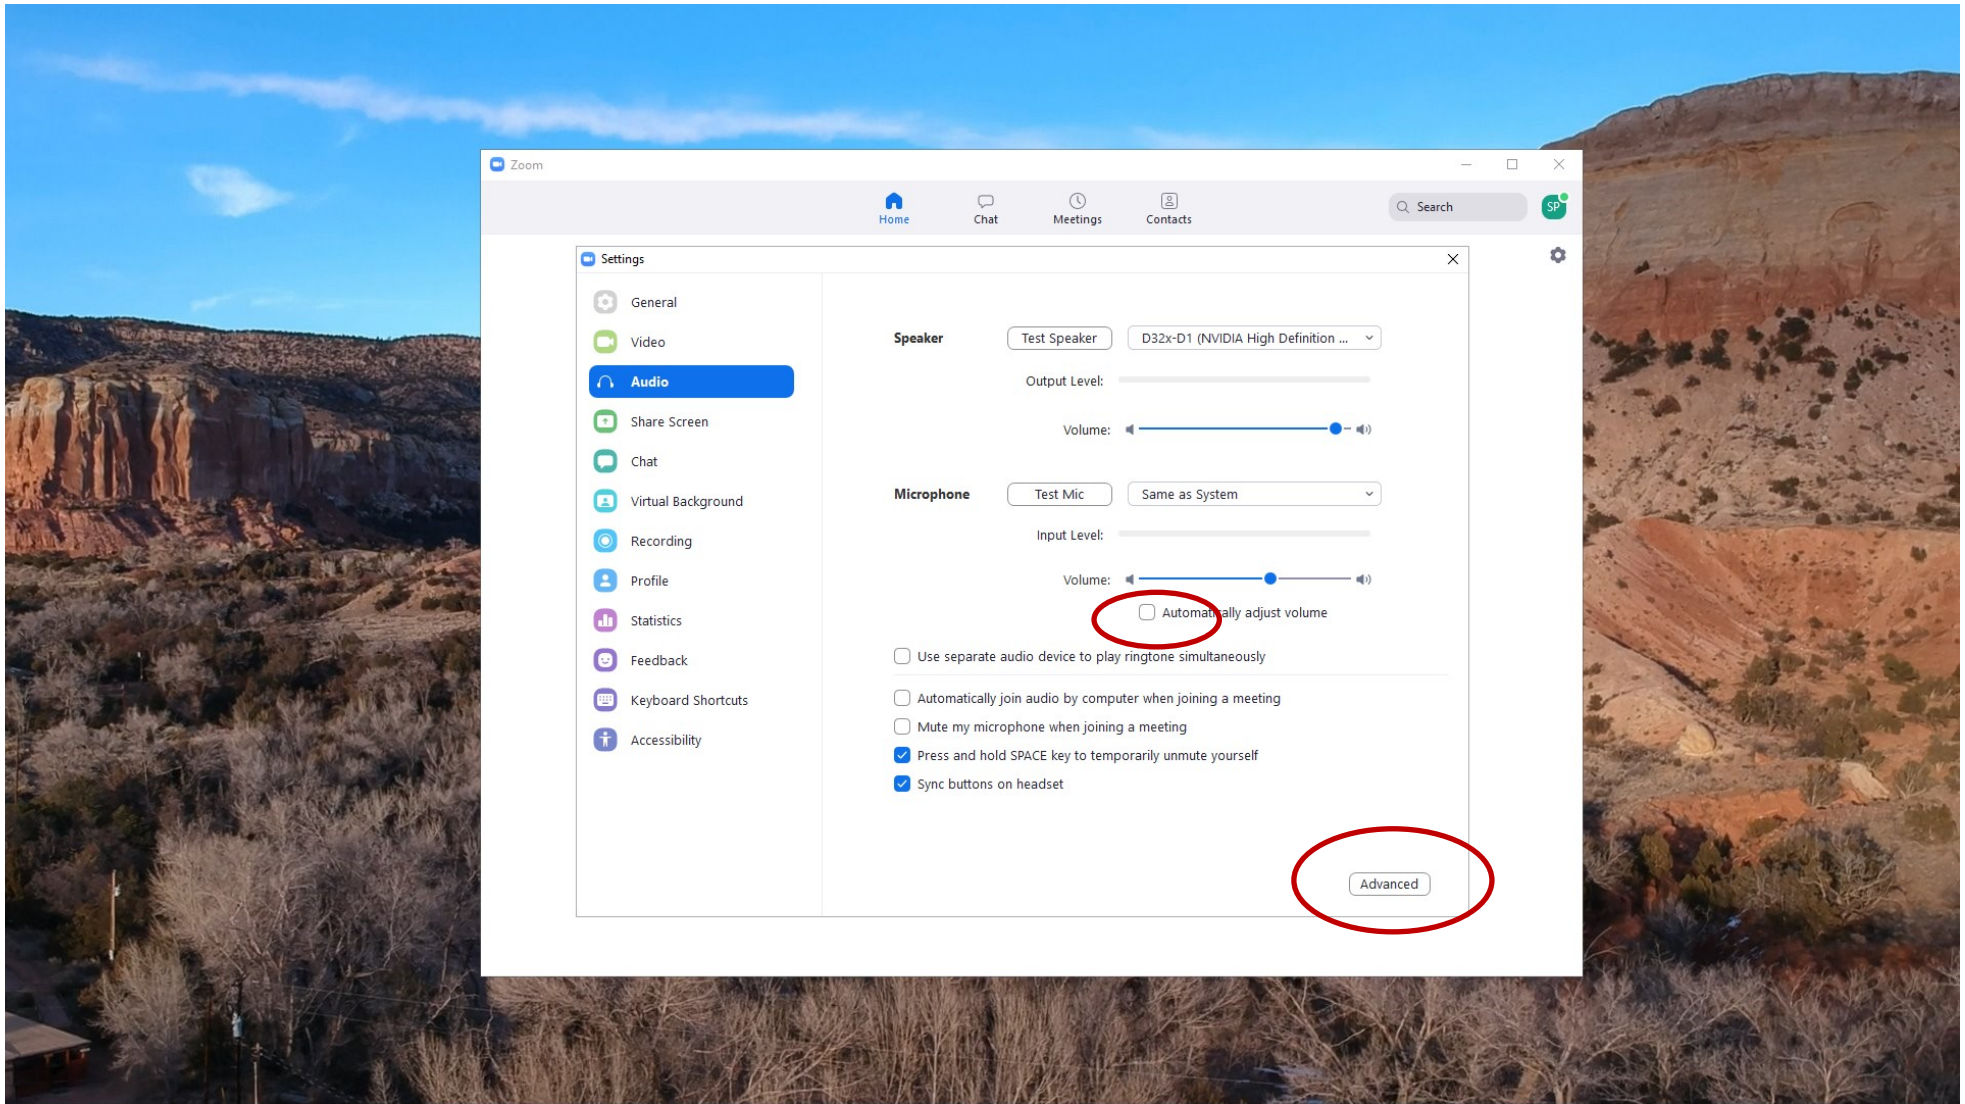

Open you your zoom client. The client would have downloaded the first time you used it in a zoom meeting. You may find it on your desk-top or in the menu of applications on your computer. On the top right click the settings button.

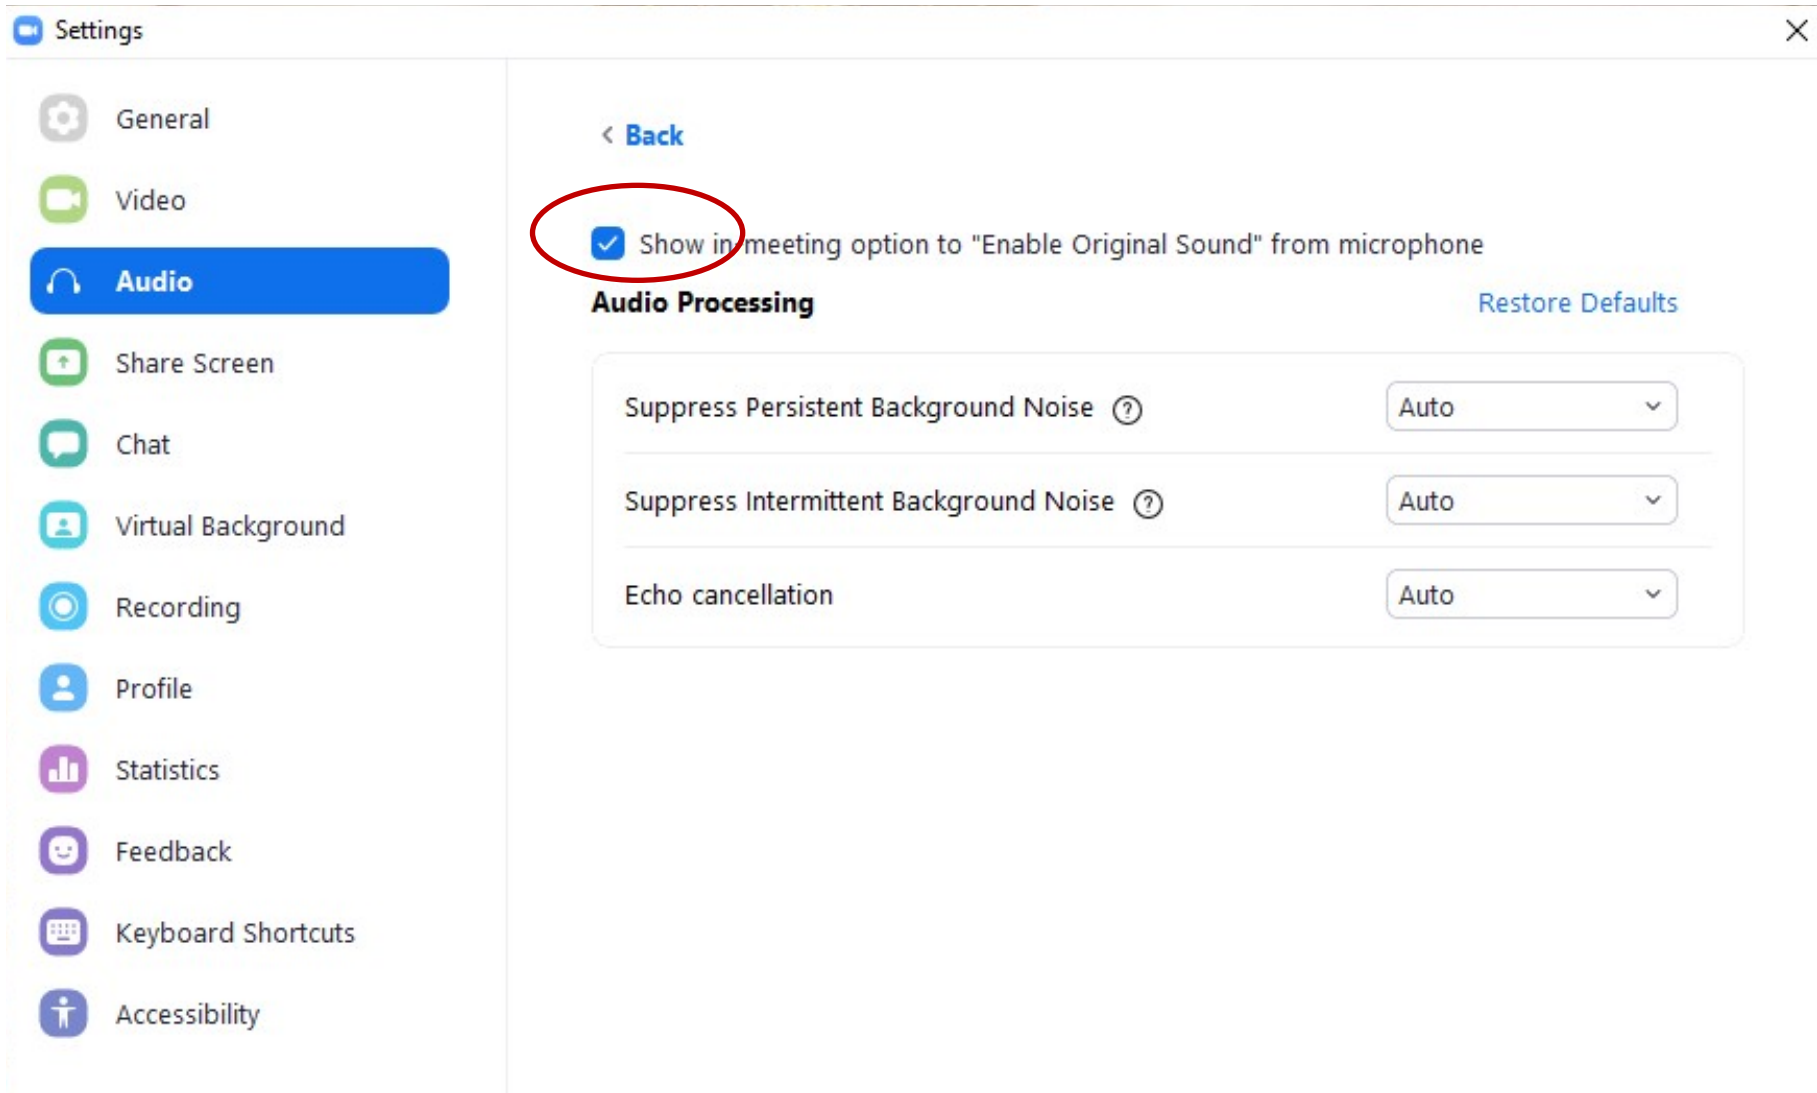

Next click on the Audio section of the settings. You will find a check box with the text “Automatically adjust volume.” Uncheck that box so that your music will sound more natural. Otherwise the volume level will get louder during softer parts of the music and softer during the louder portions. The idea is for music to have more dynamic range and allow you to better control volume levels as the musicians perform. If recording from different locations, every musician will need to make these adjustments in their client software.

Next, while the audio menu is still open click on the advanced button, bottom right.

Click on the check box 'Show in meeting option to "Enable Original Sound" from microphone.' This will give you the option to turn on and off Original sound while in a zoom meeting. Every participant in the worship service will need to enable this feature in their client.

The screenshot shows the Zoom Settings application window. On the left is a sidebar with various settings categories: General, Video, Audio (highlighted in blue), Share Screen, Chat, Virtual Background, Recording, Profile, Statistics, Feedback, Keyboard Shortcuts, and Accessibility. The main content area is titled 'Settings' and has a close button (X) in the top right corner. Below the sidebar, there is a '< Back' link. A red circle highlights a checked checkbox labeled 'Show in meeting option to "Enable Original Sound" from microphone'. Below this is the 'Audio Processing' section, which includes a 'Restore Defaults' link and three settings: 'Suppress Persistent Background Noise' (set to Auto), 'Suppress Intermittent Background Noise' (set to Auto), and 'Echo cancellation' (set to Auto). Each setting has a help icon (question mark in a circle) to its right.

Settings

- General
- Video
- Audio**
- Share Screen
- Chat
- Virtual Background
- Recording
- Profile
- Statistics
- Feedback
- Keyboard Shortcuts
- Accessibility

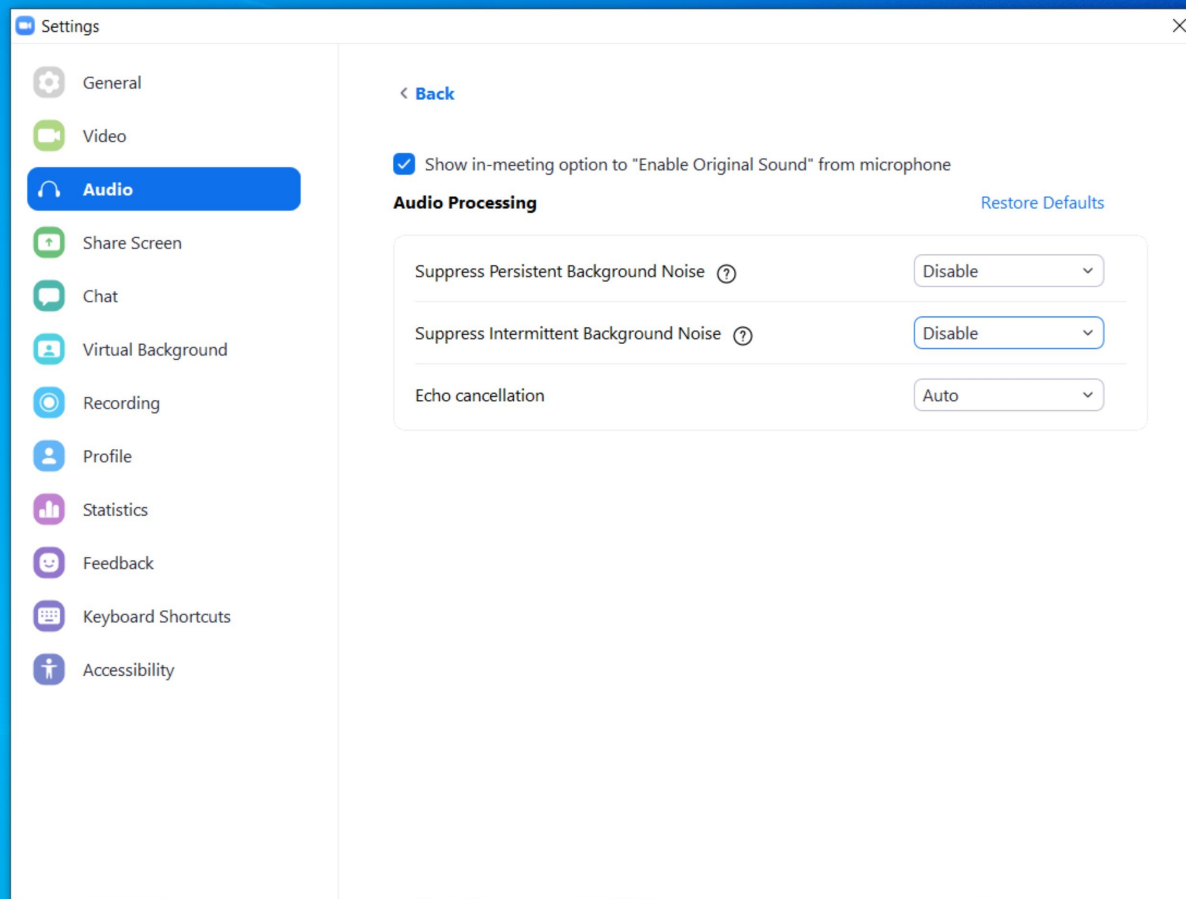

< Back

Show in meeting option to "Enable Original Sound" from microphone

Audio Processing [Restore Defaults](#)

Suppress Persistent Background Noise ?	Auto
Suppress Intermittent Background Noise ?	Auto
Echo cancellation	Auto

Next disable the Suppress Persistent Background Noise and the Suppress Intermittent Background Noise features in order to allow the full dynamic range for recordings.

The “enable original sound” option will now be available while in a zoom meeting. You may want to toggle this button off and on depending on what you are trying to do. If you are singing or playing an instrument, click it on. If you are talking back and forth in a meeting, turn it off.

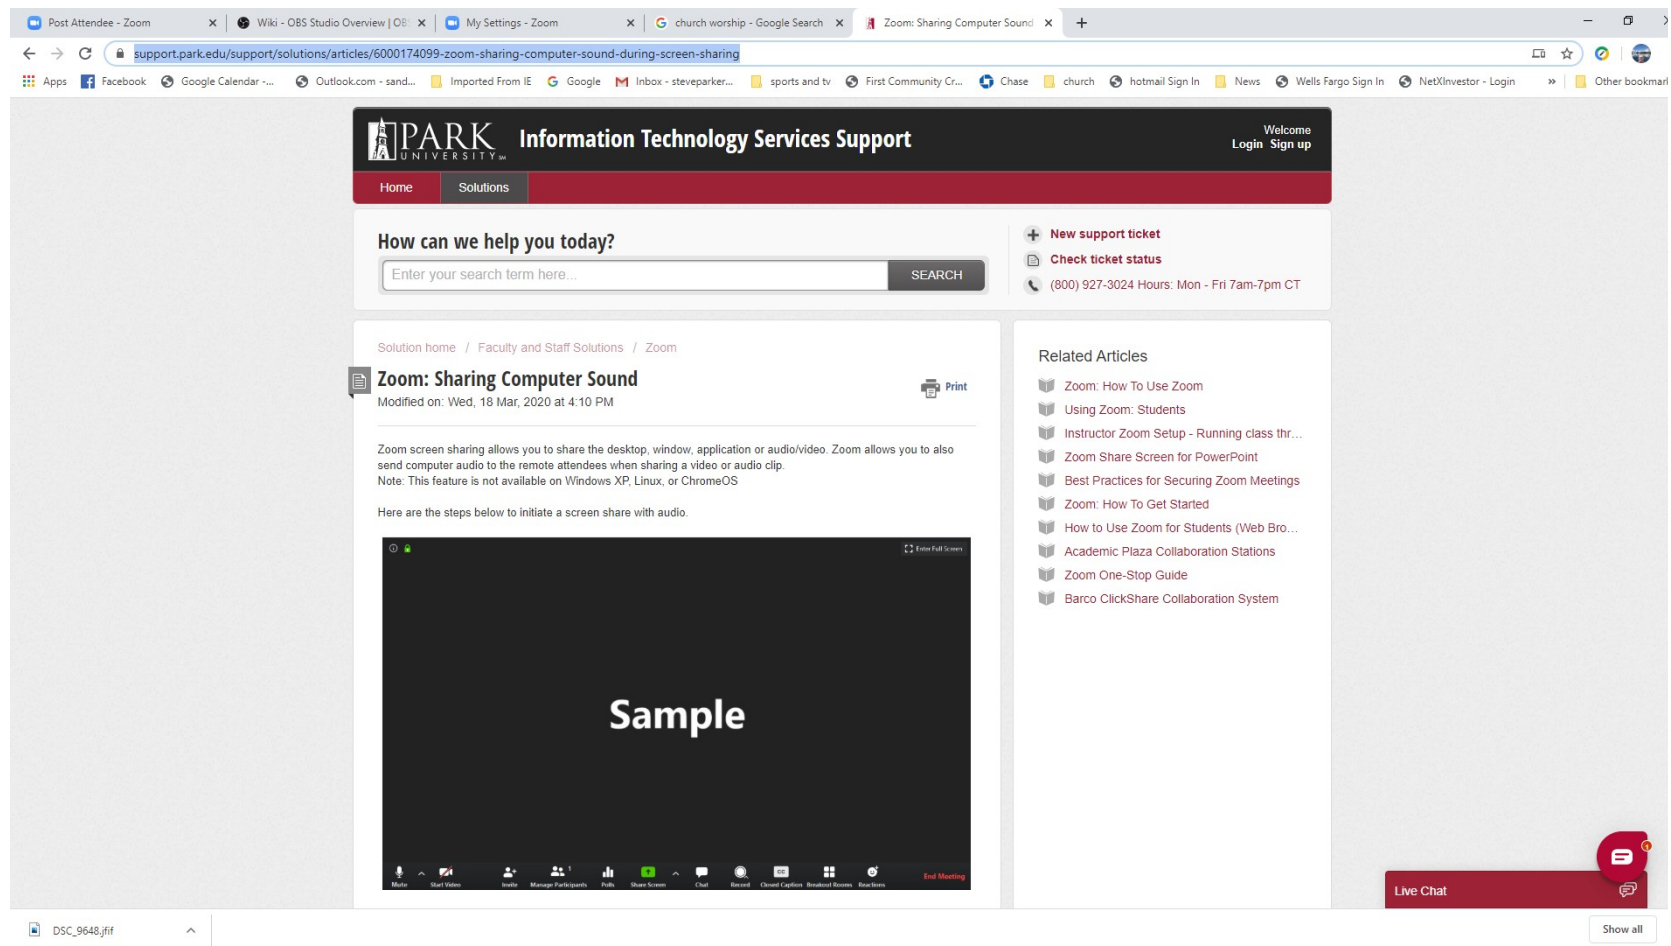

Use a good microphone such as the Blue Snowball mic. This one was purchased at Fred Meyer for \$49.99 This upgraded version from Walmart online is even better for music. \$79.99 <https://www.walmart.com/ip/Blue-Microphones-Snowball-USB-Condenser-Microphone-Gloss-Black/15048441>

Sharing Pre-recorded Music

If you want to share the sound from a pre-recorded music video on zoom visit this page that gives some pertinent information. <https://support.park.edu/support/solutions/articles/6000174099-zoom-sharing-computer-sound-during-screen-sharing> In short, Share your screen, in particular the one with the video you want to share. Be sure to click the share computer audio box on the bottom left before you share the video. Otherwise, zoom will share the sound from what you are sharing using your mic instead.

The screenshot shows a web browser window displaying a support article from Park University's Information Technology Services Support page. The article is titled "Zoom: Sharing Computer Sound" and was last modified on Wednesday, March 18, 2020, at 4:10 PM. The article text explains that Zoom screen sharing allows users to share desktop, window, application, or audio/video, and that computer audio can be sent to remote attendees when sharing a video or audio clip. A note specifies that this feature is not available on Windows XP, Linux, or ChromeOS. Below the text is a screenshot of a Zoom meeting interface showing a "Sample" screen. The Zoom interface includes a toolbar at the bottom with icons for Mute, Start Video, Leave, Manage Participants, Polls, Share Screen, Chat, Record, Closed Caption, Breakout Rooms, and Reactions. A "Live Chat" button is visible in the bottom right corner of the page.

Zoom: Sharing Computer Sound **Print**
Modified on: Wed, 18 Mar, 2020 at 4:10 PM

Zoom screen sharing allows you to share the desktop, window, application or audio/video. Zoom allows you to also send computer audio to the remote attendees when sharing a video or audio clip.
Note: This feature is not available on Windows XP, Linux, or ChromeOS

Here are the steps below to initiate a screen share with audio.

Sample

Mute Start Video Leave Manage Participants Polls Share Screen Chat Record Closed Caption Breakout Rooms Reactions **End Meeting**

Live Chat **Show all**
